

Subtraction mental strategies – the jump strategy

The jump strategy is when you use a number line to jump in tens and then units. Look at $79 - 34$. First we jump back in tens and then units. So, $79 - 34 = 45$.

$$387 - 134 =$$

$$473 - 215 =$$

$$256 - 167 =$$

$$639 - 327 =$$
